

Dear Valued Customer,

Innovative Power Products, Inc. (IPPI) can confirm that within the meaning of REACH, our company is a downstream user of chemicals. IPPI fully understands the duties as a downstream user and the broad duties of our suppliers and customers.

The products IPPI supplies are classified as “articles” in the REACH Regulation. The articles IPPI supplies do not release any substances during their intended use. If IPPI supplies articles to you that are imported into the EU/EEA, our company will fulfill the duties as an importer.

To the best of our knowledge, IPPI currently does not need to register any substances, but should this situation change, our company will ensure that it fulfills its obligation.

In accordance with Article 33 of REACH (duty to supply relevant data on composition of articles), IPPI will provide information on any Substances of Very High Concern (SVHCs) in the event concentrations are contained at levels greater than 0.1% w/w in the articles supplied to you. This disclosure includes Carcinogens, Mutagens and Reprotoxic Substances, Categories 1 & 2 (CMRs), substances that are Persistent, Bioaccumulative and Toxic (PBTs) and substances that are very persistent and very bioaccumulative (vPvBs). This information will be provided when the “Candidate List” of SVHCs is published by the European Chemicals Agency. Details of any relevant substances will include the correct name using standard chemical nomenclature and the Chemical Abstract Service (CAS) and European Community (EC) numbers, if available.

A review has been performed of every substance in every consumable present onsite and outsourced processes. The listing of substances has been cross-referenced to the ECHA database for hazard classification purposes. To the best of our knowledge, there are no current required notifications.

If you have any further questions or concerns, please do not hesitate to contact us.

Sincerely,

*Daniel Guiffre*
